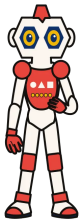
Kitchen table: fold and match



One home activity. No scissors are needed.

Gather

Three same-size paper strips, a washable marker, and a flat table.

Try it

Fold one strip in half. Fold another into sixths.

Check it

Shade one half and three sixths. Align both zero ends.

Change it

Fold the third strip into sixths. Shade just one sixth.

Ask

What stays the same when one half gets a different name?

A useful mistake

Fold unequal parts. Can each part still be called one sixth?

Keep the evidence

Draw or photograph the aligned strips. Label the common whole.

Adult note

Allow folding, tracing, or pointing. Do not race or score the work.
